

NEXT MEETING:

August 12th, 2009
12:00 PM-1:00 PM

ELASTIZELL ENGINEERED FILL *Geotechnical / Structural Applications*

Geotechnical applications of ELASTIZELL EF are as broad as the designer's imagination. ELASTIZELL EF has a typical density of 25 pcf. Although it is only 1/4 the weight, it is considerably stronger than compacted soil. Six common applications include the following:

- Bridge Approach Fills / Fills Between Retaining Walls
- Roadway Fills / Load Balancing / Landslip Repair Fills
- Weight Reducing Fills / Culvert Fills / Lightweight Levee Structures
- Foundation Fills / Landscaping and Plaza Fills
- Void Fills / Pipeline Fills / Mine Fills
- Pressure Reducing Fills / Storage Silo Fills

COME TO THE PRESENTATION TO FIND OUT MORE!

Presented by Ernie Casias with ConDeck Corporation

Ernie Casias started his career in the manufacturing of expanded polystyrene. His expertise was in building turnkey manufacturing facilities. He built facilities in Long Beach Ca., San Jose Ca. and Miami Fl. before returning home to Albuquerque, as General Manager the local EPS plants. While in New Mexico he implemented manufacturing of new product lines such as Structural insulated panels (SIPS) and a line of insulated concrete forms (ICF). He has been employed with ConDeck since 2002. ConDeck manufactures and installs Light weight insulating concrete (LWIC) in New Mexico, South and West Texas, Colorado and Wyoming. LWIC applications include taper roof systems, slip line grout fills as well as engineered fills. Ernie served on the board of the original Green Builder program for the Central NM Homebuilders Association and is the immediate Past President of the New Mexico Roofing Contractors Association, where he also held the Vice President and Chairman of the Board positions.

at

Dekker/Perich/Sabatini, 7601 Jefferson St NE, Suite 100
(2 blocks North of Ellison)

Lunch will be provided by ConDeck

Please RSVP to vickyw@dpsdesign.org by COB Monday, August 10
